DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. **Claims 35-36, 39, 40, 48, 49, 52 and 53** are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over **claims 1-6** of *U.S. Patent No. 6,111,555*. Although the conflicting claims are not identical, they are not patentably distinct from each other. The subject matter in **claims 35, 36, 48, and 49** of the instant application is fully disclosed in **claims 1-6** of the patent claiming the common subject matter as follows: logic circuits corresponding to the electrodes, each logic circuit generating a plurality of control signals based on the next state and the current state of the corresponding electrode; driver circuitry including a change up driver and a change down driver, each electrode being selectively connectable to the driver circuitry by the corresponding logic circuit control signals, wherein the logic circuits are

Art Unit: 2675

configured such that the logic circuit control signals connect the change up driver to electrodes having a low current state and high next state and the change down driver to electrodes having a high current state and low next state. While the claims may contain additional limitations the claims of the instant application as stated above, and that patent contain common patentable subject matter.

Claims 39, 40, 52, and 53 are rejected for being dependent on a rejected base claim.

Allowable Subject Matter

3. **Claims 2, 3, 10, 12-14, 16, 17, 21, 22, and 24** are allowed.

Response to Arguments

4. Applicant's arguments with respect to **claims 2, 3, 10, 12-14, 16, 17, 21- 24, 26, 27, 31-33, 35, 36, 39, 40, 42-46, 48, 49, 52, and 53** have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2675

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
